

Do you want an exciting career as an Offshore Services Engineer? on the Ormonde Windfarm, based in Barrow-in-Furness

Based at Port of Barrow in Furness, England

REpower UK are recruiting a team of Offshore Service Engineers to carry out maintenance and fault finding on the 30 turbines at the Ormonde Windfarm situated in the Irish Sea off the coast of Barrow-in-Furness.

You will need to exercise technical judgement and decide whether the fault can be repaired safely within a reasonable timescale in the event of being called out, or whether to leave the job until the next day.

The work is both technically and physically demanding. An Offshore Service Engineer is required to work at height in tough conditions; therefore a high level of physical fitness is essential.

REpower
Systems

Skills desirable...

- Experience of servicing and maintaining high voltage electrical industrial plant or experience of mechanical rotating plant.
- ONC level or equivalent experience in electrical engineering. Similar qualifications and/or experience in mechanical engineering and mechatronics would also be considered.
- Ideally have experience of Method Statement and Risk Assessments production and use in the workplace.
- Working knowledge of UK Health and Safety regulations in offshore environments.
- Experience working offshore or within the wind power industry would be highly advantageous.
- Full current driving licence.
- Good written communication skills and computer literacy skills.
- Proficient in Microsoft Office packages.
- Be seaworthy and have an aptitude for altitude.

Other key tasks are...

- Meeting customers on site and building close, effective working relationships with colleagues and the Site Manager, so good interpersonal and communication skills are essential.
- Administration and documentation skills using the company reporting system.
